

NEW from air spectrum

odour control product

gel is a blend of natural essential oils combined with a biodegradable copolymer, producing a gel like product suitable for industrial and domestic odour neutralising applications

application environment

hospitals and care homes • domestic areas • ventilation ducting • hydroponics • sanitation

how it works

gel essential oil ingredients contain naturally occurring terpenes which are known to have characteristics which can reduce both bacteria and odour alike. Odours which are attracted to the airborne molecules given off by the gel are broken down through complex chemical processes, rendering them harmless.

usage

gel is available in various characters & packages, and may either be used in its own container, or added to other proprietary products. Available in 1kg, 5kg and 20kg.

physical - chemical properties

appearance	semi solid gel
colour	characteristic/colourless
characteristic odour	varies with selection
bulk density g/cm ³	1.02
solubility in water	non soluble
pH @ 50g/L	7

say no to odour with gel!

Air Spectrum Environmental is the leading supplier of Odour Control and Dust Suppression systems and service; supplying an extensive range of liquid neutralisers to both UK and International markets.

gel is a bestselling range of natural odour neutralisers, non-toxic, food safe using biodegradable essential oils collected from sustainable sources. The **gel** range is fragranced to enhance their appeal yet still contain our bestselling ODR odour neutraliser.

gel range uses a safe super absorbent copolymer to produce the “hydrated gel”, thus allowing the odour neutraliser to be released as a vapour allowing rapid mixing with the gaseous malodours. The neutraliser breaks down the molecular structure of the odour molecules to form harmless non-volatile salts that degrade naturally.

The non-toxic food safe nature of the **gel** range allows it to be used in many indoor environments and within ventilation systems. It is harmless to humans and animals and will not cause irritation or health complaints.

gel odour control product

working in 5 ways:

pairing • oxidation • adsorption • absorption • combination

applications:

hospitals and care homes • domestic areas • ventilation ducting • hydroponics

fragrances available for gel are:

bubblegum • cotton fresh • eucalyptus • green grass • peppermint

service agreements

Air Spectrum can offer a range of service level agreements, to ensure equipment efficiency and reducing running costs. Our comprehensive service network gives full UK wide coverage, ensuring market leading response times to meet customer requirements.

odour consultancy service

With expert knowledge of solutions and control measures, Air Spectrum's consultants will offer unbiased and accurate advice about appropriate abatement and control measures.

Our service also includes Category Odour Scaling, Sampling & Analysis. With expert knowledge of solutions and control measures, Air Spectrum can offer unbiased and accurate advice about appropriate abatement and control measures.

Air Spectrum operates to the highest standards and is accredited by a number of professional bodies. These include ISO 9001 quality standards accreditation as well as international environmental standard ISO 14001 accreditation.
