

NEW from air spectrum

dust control additive

dst 6 has been specially developed as an effective dust control product for sandy soil dust and other arena materials.

dst 6 is an oil based product.

application environment

The main applications for **dst 6** are:

- riding arenas
- race tracks/bridal paths
- forest lanes/dirt tracks
- garden and park pathways

how it works

dst 6 is easily dispersible, has low viscosity and is stable down to temperatures of -10°C. It is sprayed onto the soil surface and mixed into the soil with a rake or wire netting.

dosage

The usual dosage is between 15 to 50g/m² and by the thickness of the soil (cms), however this can vary depending on the soil quantity and quality. Water is not required when applying the product, and only needs to be applied 1 to 2 times per year for efficient dust control. **dst 6** must be applied on dry soil.

physical - chemical properties

appearance	liquid
colour	none
apparent density (g/cm ³)	0,86
viscosity (cps) à 25°C	50
flash point (°C)	205
storage temperature (°C)	5-30
shelf life (months)*	12

*if the product is well stored at a temperature between 5°C and 30°C

- oil based
- low viscosity
- easily dispersible

say no to dust with dst!

Air Spectrum Environmental is the leading supplier of Odour Control and Dust Suppression systems and service; supplying an extensive range of liquid neutralisers to both UK and International markets.

dst is our range of dust suppression additives using industry tested biodegradable polymer based components. The dst range offers various treatment methods for a wide range of applications.

dst dust control additive

working in 4 ways:

encapsulating • adhering • compacting • protecting

applications:

arenas • dirt roads • conveyors • earthworks
embankments • stockpiles • mining

service agreements

Air Spectrum can offer a range of service level agreements, to ensure equipment efficiency and reducing running costs. Our comprehensive service network gives full UK wide coverage, ensuring market leading response times to meet customer requirements.

odour consultancy service

With expert knowledge of solutions and control measures, Air Spectrum's consultants will offer unbiased and accurate advice about appropriate abatement and control measures.

Our service also includes Category Odour Scaling, Sampling & Analysis. With expert knowledge of solutions and control measures, Air Spectrum can offer unbiased and accurate advice about appropriate abatement and control measures.

Air Spectrum operates to the highest standards and is accredited by a number of professional bodies. These include ISO 9001 quality standards accreditation as well as international environmental standard ISO 14001 accreditation.
