

Dispersal equipment Fans & Atomisers – mobile

Vortex Rotary Atomiser Mobile

Product Aim

To provide a completely mobile solution to localised odour issues.

Typical Applications

- Remediation
- Landfill Sites
- Composting Sites
- Water Treatment

How it Works

The system works most efficiently with the *Odr* range of additives, non-toxic odour neutralisers supplied by Air Spectrum. The correct amount of *Odr* (dependant on which of the *Odr* range is being used) is put directly into the 1125L bowser and water from a clean, potable supply is then added to top up. The Vortex Rotary Atomiser Mobile requires a 110V or 240V electrical supply from a generator of at least 5.5kVA (customer supplied). The Vortex Rotary Atomiser Mobile operates with a simple on/off switch and produces 20m of finely atomised mist, allowing close targeting of odours, delivering an effective mobile solution to dust and odour problems.

The *Odr* range is produced using bio-degradable essential oils to effectively neutralise odour particles, rather than simply masking the odour. Please see the *Odr* additive product datasheet for more information (available on request by telephone or as downloads from our website, see details below).

Available to Purchase or Hire

The Vortex FX is available either at competitive hire rates, or can be purchased at an affordable price.
